

“McPhail” trap

PRESENTATION OF THE “McPhail” TRAP

Pheromone trap for use in combination with Attract pheromone dispensers.
The “McPhail” trap is a plastic trap of two interlocking sections:

- a clear top
- an inverted funnel base.

APPLICATION

Insects enter the trap through a hole in the inverted funnel base in response to the pheromone that hangs inside at the top of the trap.

Once inside the trap, insects remain held by the pheromone and by the light entering through the clear top. When exhausted they fall into the liquid contained in the inverted funnel base where they drown. This liquid consists of water mixed with detergent or insecticide.
